

Resume

Quant Researcher & Software Engineer · b.anikesh@gmail.com

open to full-time quant research & AI engineering roles from Dec 2026

experience

May 2026 – present

Quantitative Research Intern · Qsentia · Los Angeles

- Research agentic trading strategies for crypto markets: momentum, reversal, and statistical arbitrage signals executed by Claude-based agents
- Build systematic backtests and evaluation harnesses for agent trading decisions

2025

Senior Software Engineer · Visa · Singapore

- Designed and deployed an AI system that finds and remediates security vulnerabilities in production code, combining static analysis, LLMs, and ML models
- Led development of a self-healing framework using automated anomaly detection to recover failing services, improving reliability by 25%

2023 – 2025

Software Engineer · Visa · Singapore

- Built production ML pipelines processing billions of transaction data points daily for payment risk analytics and fraud detection
- Trained and deployed service-load forecasting models to optimize server allocation, improving throughput by 15%
- Prototyped agentic AI systems that automate compliance monitoring across payment clusters, reducing operational risk

- Built statistical monitoring and reporting infrastructure for model evaluation and alerting, cutting production incidents by 40%

2021

Software Engineer Intern · Factorem · Singapore

- R&D on CAD file analysis using linear algebra and vector geometry to detect structural defects like boundary holes and sharp edges
- Shipped a Flask feature-detection API for real-time shape analysis of CAD models

2020

Data Science Intern · Southern Ridges Capital · Singapore

- Built a Python framework for FX option valuation and calibration under Garman-Kohlhagen, with automated implied-vol surface construction via cubic-spline interpolation on total variance
- Designed a Flask-SQL dashboard tracking daily pricing errors, vol shifts, and delta/vega exposures for portfolio managers

education

exp. Dec 2026

UCLA Anderson School of Management

Master of Financial Engineering

Coursework: Machine Learning, Optimization, Time Series Analysis, Stochastic Calculus, Econometrics

2023

National University of Singapore

B.Comp., Computer Science · Minor in Management

Merit Scholar

Coursework: Machine Learning, Probability and Statistics, Investment Analysis and Portfolio Management

skills

languages

Python

SQL

C++

TypeScript

Java

R

ml & ai

- PyTorch
- scikit-learn
- Pandas
- Claude API
- LangChain
- RAG
- evals

data & infra

- ETL pipelines
- PostgreSQL
- Docker
- AWS
- Flask
- React

quant

- Monte Carlo
- options pricing
- GARCH
- backtesting
- P&L attribution
